Clinic Technology

### CLIENTS:

- ✓ California Department of Corrections and Rehabilitation
- ✓ Inland Empire Health Plan
- ✓ Martin Luther King Hospital
- ✓ Avanti Hospitals
- ✓ Arrowhead Regional Medical Center
- ✓ Riverside University Health System

**PITCH:** There is no requirement that something important must be complicated. Afya is an easy to use virtual care (telehealth) application providing access to care via an AI chatbot that connects consumers with our primary care and specialist physicians to address health concerns. With over 100+ board-certified specialists covering 20+ specialties, Afya resolves health concerns quickly, accurately, and conveniently from anywhere, anytime.

**THE PROBLEM:** Access to specialty care is limited, inefficient, and expensive. Patients often wait months to receive specialty care and often forced to seek care in the Emergency Department. Months pass and costs increase before the appropriate care setting is reached and patient conditions worsen.

**OUR SOLUTION:** Afya provides a single place for primary care physicians, specialists, and patients to coordinate care. Afya technology and process reduces unnecessary visits and delays to care. Our WISE team is trained to implement Afya seamlessly in clinical workflows. Health plans and self-insured employers that utilize HubMD Specialists via the Afya app will experience lower healthcare costs, accurate diagnoses, and on-demand access to care.

**MARKET:** Self-Insured Employers, Health Plans, and Delivery Systems will use our cost competitive services to provide their employees, plan members and patients access to timely care.

**HOW WE ARE DIFFERENT:** We offer AI-augment secure chat and video (Afya), Specialists (HubMD) and workflow design, implementation, and support (WISE). We can provide one or all three telehealth services in one turn-key specialty access service.

Our Business Model is the key differentiator: Faster client acquisition via HubMD Medical Group and Afya as its MSO. We offer one recurring Virtual Care as a Service (VCaaS) Fee structure that is competitive, and we are mission focused serving the Safety Net and underserved.
